Care of Worktops

Do not place hot pans directly on to the worktops as this can damage the surface.

Do not assume that joints in worktops are waterproof – Mop up any spillages immediately.

Be careful of any water spillage around sink tops – particularly around the front edge of the worktop – Mop up any excess water immediately.

Do not cut directly onto the work surface – Use a dedicated chopping board. Even a blunt knife can mark the surface.

Following these basic guidelines will ensure the worktop lasts the lifetime of the kitchen and keep its appearance.
